Imagine a world where tall ships sail the sky. A world where gifted men and women from all walks of life develop the ability to control the natural elements. Life has been at peace for two hundred years, allowing industry and invention to flourish.

It is a time when the rich sit atop a throne of privilege and decadence, yet the poor fall deeper into poverty. It is a world that is about to fall into a period of turmoil; a time so dark that nothing will ever be the same again.

The Spark, the first entry in the Imperial War series, is an epic, character driven science-fiction/fantasy tale set in this fantastical world. The story unfolds through the perspective of seven different individuals, all representing different aspects of Wynne's society. Each of these players offers a unique look at the societal differences between nobility and impoverished, radical ideology of progress, and the sanctity of tradition.

### **Kathy Rigas says**

The Spark was an intense, emotional adult take on the steampunk sub-genre of science fiction. Characters are well crafted humans with flaws and strengths which adds a level of relatability and believability. Many themes run throughout, adding layers of intrigue on subsequent read throughs. Highly recommend.

Just finished this phenomenal book. The unique manner that it is written through the various characters made it quite enjoyable. It is full of suspense, adventure, and intrigue with a splash of sexuality. The author's use of description encapsulates the reader and leaves them hungry for the next book in this series. This will most definitely be excellent put on screen.
