Rosa says

First of all: Finally, in the third and final book of the Pocketbook series of Roswell novels, Liz has something to do!!! She's not stuck in a post-traumatic stress induced memory loop of being shot, and she's not sitting around while everyone around her searches for Michael. She is being the science queen the show always wrote her to be and is solving the alien dilemma pretty much all by herself. THAT'S MY LIZ PARKER! (I'm so glad someone finally wrote her the right way, can you tell?)

In addition, this is the only one of the three novels where ALL of the Roswell gang is present a good amount of the time. Kyle, Michael, and Alex get to steal a construction truck together to save part of the town; Valenti, Max, and Tess get to sneak into a warehouse to save another part of the town; Liz and Maria sneak into a hospital to cure all the patients; Isabel gets to be their woman on the inside to tell Max & co about the army developments in the quarantined hospital.

For the most part, this book is 100% the way I remember the show. Everyone works together even when their personal relationships with each other are falling apart, with occasional small moments of heart-to-hearts with the characters. And the plot line is exactly the kind of thing that the show would have tackled in a one-off episode.

The only hiccoughs are minor: a few notable typos really close together, the group refers to the alien codename as "Scandinavians" when any fan worth their salt knows the term was "Czechoslovakians," and again there was too much Tess for my taste. That last one is a personal preference, not a technical critique, however; Tess was a big part of season 2, so it makes sense for her to be a big part of the book. Doesn't mean I have to like it though.

Master says

A lot of people in Roswell have their skin change color to green, and our group must do something about it.

Lizzie says

Any book that let me visit with Max, Liz, Maria and Michael, I am there. I always loved these characters on Roswell and even though the books are never as good as the television show I just love visiting with these old friends again.

Katie Jauncey says

These books are rated more for teens, and I read the Roswell series when I was about 15 but I still really love reading them now. They're written in an easily worded way so that if you want something quick and easy to read, they're perfect I love the whole series :)

Jackie Krasuski says

The story was fun and funny, with the usual excitement that a fan of the TV show would come to expect. The authors, although not exactly fantastic writers, have a very good feel for the characters' personalities and how they react to situations. I would just love to see an entire town full of green people... I would probably die laughing.

Wendy Mills says

When people in Roswell start turning green, including Kyle, Maria, and Alex...it is up to Max, Liz, Michael, Isabel, and Valenti to find out what is going on.

Liz does an experiment using skin taken from Alex, and some from her own, using her understanding of recent bio chemistry lessons to guide her along. When Max enters her room and the cells under her microscope light up to a brilliant blue like the alien crystals in the cave and inside Grant Sorenson...they realize when the crystals died that the liquid went into the ground and into that side of town's drinking water.

Using Max's plasma dripped into water...they first cure their friends and then set out to cure everyone else without being caught by the Army who has taken over the care of the 'green-skinned' people.

Phyllis says

Christopher Buckley, Wm. F. Buckley's son, is a satirist about Washington and politics. This one is about talk shows and UFO's and government conspiracies.
