Creation? Evolution? Both are woven with lies, which are exposed when an engineered virus purposely kills most of mankind. Those who survive are controlled from behind the scenes by a dark force that has waited millenniums for total domination. Gone are our scientists, leaders, military commanders, teachers, engineers, parents and children—the only ones left standing are those useful to the agenda.

To maintain order, the United Nations organization dutifully steps in, but its leaders are not what they appear to be. The trusted UN uniform causes each army to hand over its leash, resulting in all of the world's soldiers following the command of an unknown power—without a single shot being fired. The plan unfolds perfectly, except for one exception.

The virus brings about an unexpected DNA mutation among the Earth Sentinels, causing a select few to develop supernatural abilities, such as, Zachary, a young man who is struggling to adapt to the Amazon Jungle while living with his indigenous wife and family; Haruto, a healer in Japan, who leads a spiritual life; and Tom and Cecile, rebellious Native Americans who reside on a reservation in Canada. During these transformative changes, Bechard the fallen angel tries to regroup his fellow Earth Sentinels so they can free the human race from its unseen shackles. But how do you free people who don't know they are slaves?

"Of Stars and Clay" is the second book in the Earth Sentinels series, but stands on its own.
